Hasan Naseem

Senior Automation Engineer at Intact

Toronto

Summary

Picture this: You're standing in a busy subway car, dying to get out and reach your daily Tims. You find yourself searching for patterns in each stop - where the doors are opening, how many people get off. Anything to get you closer to the exit - to the coffee. I like to operate in an efficient manner, to find the patterns that generate a clean way of living. This is where my love for code comes in. I've been making and breaking webpages since I was 12 and always searching for that clean and efficient line. It keeps me sharp, engaged and focused. This is my vocation.

myTechStack: | Ruby on Rails | jQuery | HTML5 | CSS3 | RESTful API | PostgreSQL | Unit Testing | Heroku | Vanilla Javascript | Git |

I am currently jamming on some Django, trying to create silky smooth HTML5 with React.js learning how to better test my code and be a responsible developer by actively participating in civic tech!

To find out more about me check out my github: <https://github.com/hnaseem1>

get in touch via email: hn92@live.com
